DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

BONAFIDE CERTIFICATE

This is to certify that this Summer Internship project report "**UI/UX Design of Cake Ordering System – Mobile Application**" is the Bonafide work of **PUGAZHVADIVU E (810023104041)** and has satisfactorily completed the course of **CS3711 – SUMMER INTERNSHIP** for **SEVENTH semester, B.E. COMPUTER SCIENCE AND ENGINEERING** during the academic year **2026–2027**.

Faculty Incharge **Head of the Department**

Submitted for the practical examination held on _____.

ABSTRACT

The Cake Ordering System is a UI/UX design project carried out during my internship at Media Wave Technologies, Tiruchirappalli. The project focuses on designing a warm, friendly and easy-to-use mobile experience for ordering cakes from local bakeries. It helps users sign up or continue as a guest, discover bakeries and cakes by occasion, customise a cake (weight, flavour, eggless option and message on the cake), choose a delivery date and time slot, pay with a preferred method, and follow the order live until it is delivered.

The project follows a user-centered Design Thinking approach consisting of Empathize, Define, Ideate, Wireframing, Visual Design, Prototyping, and Testing. User research and competitor analysis were used to understand common issues in existing cake and food ordering applications. Based on the findings, a user persona, user flow, low-fidelity wireframes, a design system, high-fidelity screens, and an interactive prototype were created.

Figma was the primary design and prototyping tool. The final design uses a consistent visual language with a chocolate brown and rose-pink palette, a golden accent, a soft cream background, bold headings with clean sans-serif body text, rounded buttons and cards, and a four-tab bottom navigation bar (Home, Orders, Cart, Profile). The application includes the Splash, Login, Sign Up, Home, Cake Menu, Cake Customisation, Cart, Checkout, Order Confirmation, Live Order Tracking, and Order Delivered screens.

Usability, responsive, functional, and visual checks were carried out on the prototype. The results indicated that the proposed interface improved navigation clarity, reduced user effort, simplified cake customisation and checkout, and maintained visual consistency across screens. The internship provided practical exposure to professional UI/UX workflows and strengthened my skills in research, wireframing, design systems, prototyping, testing, documentation, and presentation.

1. INTRODUCTION

An internship is an essential part of professional education because it connects academic learning with real-world industrial practice. During the internship at Media Wave Technologies, Tiruchirappalli, I worked in the UI/UX Design domain and designed a modern mobile application for ordering cakes online. The project focused on creating a simple and attractive interface for users who want to discover bakeries, choose and customise cakes for special occasions, make payments, and track deliveries. The design process was carried out primarily in Figma and followed a user-centered Design Thinking methodology.

The project included user research, competitor analysis, requirement analysis, user persona, user flow, low-fidelity wireframes, a design system, high-fidelity UI design, interactive prototyping, and usability testing.

1.1 OBJECTIVES OF THE INTERNSHIP

- To understand professional UI/UX workflows followed in the software industry.
- To perform user research, requirement analysis, and competitor analysis.
- To create user personas and user flows.
- To design wireframes and high-fidelity mobile interfaces using Figma.
- To create a reusable design system with consistent typography, colour, spacing, icons, and components.
- To develop an interactive prototype for usability evaluation.
- To improve problem-solving, creativity, communication, teamwork, and documentation skills.

1.2 SCOPE OF THE PROJECT

The scope of the Cake Ordering System includes designing a complete cake ordering experience that supports the major stages of the customer journey. The application enables users to register or log in (including social sign-in and guest access), search for bakeries and cakes, browse occasion categories, view a bakery menu, customise a cake, add it to a cart, enter a delivery address and slot, select a payment method, receive an order confirmation, track the delivery live, and rate the experience or reorder.

The project focuses primarily on UI/UX design rather than backend software development. It covers the design process from research and requirements to wireframes, visual design, prototyping, and testing. The final interface is intended to provide a clear and consistent experience across common mobile screen sizes.

1.3 PROJECT OBJECTIVES

- Reduce the effort required to find bakeries and cakes.
- Provide a clear and predictable navigation structure.
- Make cake customisation (weight, flavour, message, date and time) simple and visual.
- Simplify cart and checkout interactions with a visible step indicator.

- Present payment choices in an understandable manner.
- Provide clear order-status and delivery partner information.
- Maintain visual consistency through reusable components.
- Create a developer-friendly prototype that can be implemented as a mobile application.

1.4 BENEFITS OF THE INTERNSHIP

- Practical exposure to industry-oriented UI/UX workflows.
- Hands-on experience with Figma, prototyping, and reusable components.
- Better understanding of user-centered design and Design Thinking.
- Experience in documenting a complete case study and project report.
- Improved communication, presentation, teamwork, and problem-solving skills.

1.5 DESIGN APPROACH

The project follows a user-centered approach in which design decisions are connected to user needs and observed pain points. The process begins with understanding users and existing ordering experiences, continues through definition and ideation, and then moves into wireframing, visual design, prototyping, and testing.

Stage	Purpose
Empathize	Understand user behaviour, expectations, and pain points.
Define	Convert research findings into clear design problems.
Ideate	Explore alternative layouts, navigation patterns, and interactions.
Wireframe	Establish structure and information hierarchy before visual styling.
Visual Design	Apply colours, typography, icons, components, and spacing.
Prototype	Connect screens and simulate the user journey.
Test	Evaluate usability, navigation, readability, and consistency.

1.6 INTERNSHIP OUTCOME

The internship strengthened my practical understanding of UI/UX design and gave me experience in converting user requirements into a structured digital interface. The project improved my confidence in using Figma and in presenting design decisions through research, wireframes, design systems, prototypes, and testing results.

1.7 TECHNOLOGIES AND TOOLS

Technology / Tool	Purpose
Figma	UI design, wireframing, components, design system, and interactive prototype.
Google Fonts	Typography selection and consistency.
Icon libraries	Consistent iconography for navigation, search, call, chat, and payment icons.
Image assets	Cake photography, bakery logos, and the application brand mark.

Figma was the primary design environment. It supported reusable components, Auto Layout, prototyping with connected flows, collaboration, and developer handoff.

2. COMPANY PROFILE

2.1 ABOUT THE COMPANY

Media Wave Technologies is a software company located in Tiruchirappalli, Tamil Nadu. The company specializes in Web Development, Mobile Application Development, UI/UX Design, Digital Marketing, and Software Solutions. It provides innovative and user-friendly digital solutions for businesses and educational institutions. The company follows industry-standard software development practices and encourages interns to work on real-time projects.

2.2 VISION

To become a leading software development company by delivering innovative, reliable, and high-quality digital solutions that enhance customer satisfaction and business growth.

2.3 MISSION

- To develop high-quality software applications.
- To provide user-friendly UI/UX design solutions.
- To adopt modern technologies in software development.
- To encourage innovation and continuous learning.
- To deliver excellent customer service.

2.4 SERVICES OFFERED

Media Wave Technologies provides the following services:

- Web Application Development
- Mobile Application Development
- UI/UX Design
- Website Design and Development
- Digital Marketing
- Graphic Design
- Software Testing
- Software Maintenance and Support

2.5 ORGANIZATION STRUCTURE

The organization follows a structured hierarchy to ensure smooth project execution and effective teamwork.

- Managing Director
- Project Manager
- Team Lead
- UI/UX Designers
- Frontend Developers
- Backend Developers
- Quality Assurance (QA) Engineers
- Interns

The internship was carried out under the guidance of Sivanika S (Software Developer, Industrial Expert and Joint Supervisor) and other experienced professionals, which helped in understanding industry practices, teamwork, project planning, and professional communication.

3. DAILY WORK REPORT

The internship lasted for 27 working days from 15 June 2026 to 15 July 2026, during which I learned requirement analysis, user research, wireframing, prototyping, design systems, usability testing, and professional project documentation. The day-wise activities performed during the internship are presented below.

Day 1: Company orientation and introduction to the internship project, Cake Ordering System.

Day 2: Studied project requirements and understood the objectives of the application.

Day 3: Conducted competitor analysis by studying popular food and cake ordering applications.

Day 4: Performed user research to identify user needs and expectations.

Day 5: Created user personas based on the research findings.

Day 6: Prepared the user flow and information architecture of the application.

Day 7: Designed the brand identity: logo, colour palette and typography.

Day 8: Created low-fidelity wireframes for the Login, Sign Up, and Home screens.

Day 9: Created wireframes for the Cake Menu, Customisation, Cart, and Checkout screens.

Day 10: Reviewed wireframes with the mentor and implemented suggested improvements.

Day 11: Created the design system including colours, typography, icons, buttons, cards, and reusable UI components.

Day 12: Designed the Splash, Login, and Sign Up screens using Figma.

Day 13: Designed the Home screen with search, occasion categories, and featured bakeries.

Day 14: Designed the Cake Menu screen with category tabs and price and weight details.

Day 15: Designed the Cake Customisation screen with weight, flavour, eggless option, message on cake, and delivery slot.

Day 16: Designed the Cart screen with price details.

Day 17: Designed the Checkout screen with step indicator, address, and payment options.

Day 18: Designed the Order Confirmation screen.

Day 19: Designed the Live Order Tracking screen with map and status timeline.

Day 20: Designed the Order Delivered screen with rating and reorder options.

Day 21: Reviewed the complete UI design and made necessary improvements.

Day 22: Created the bottom navigation bar and ensured consistency across all screens.

Day 23: Developed the interactive prototype in Figma by connecting all screens.

Day 24: Conducted usability testing for all screens.

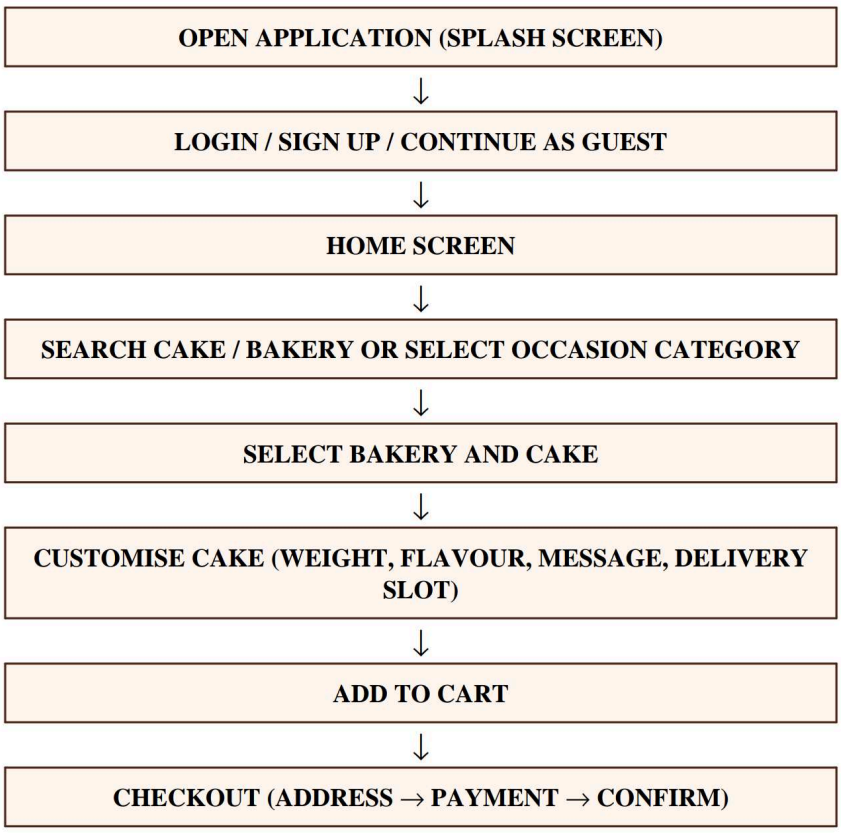

Day 25: Improved the UI based on testing feedback.

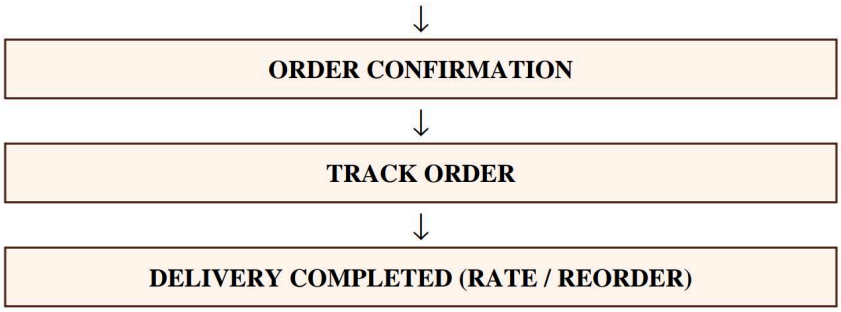

Day 26: Verified the layouts for different mobile screen sizes.

Day 27: Finalized all application screens, prepared the project documentation, presented the prototype, and received feedback from the internship mentor.

4. BLOCK DIAGRAM

The following block diagram represents the user flow of the application, that is, the steps followed by users while interacting with it. It helps in creating a smooth navigation experience.

Benefits of User Flow

- Improves navigation.
- Reduces user effort.
- Provides better user experience.
- Helps developers understand application structure.

5. CAKE ORDERING SYSTEM – MOBILE APPLICATION

5.1 EXISTING SYSTEM

On many existing platforms, ordering a cake is the same as ordering any other food item. Users often have to go through several screens, and customisation options such as weight, flavour, eggless choice, and a message on the cake are hidden, typed in a note box, or handled over phone calls. Navigation is often inconsistent, and understanding the delivery slot and order status can be confusing.

- Navigation between screens is complicated.
- Cake customisation options are limited or hard to find.
- The checkout process is long or confusing.
- Search and occasion categories are inadequate.
- Visual hierarchy is inconsistent.
- Payment options are difficult to understand.
- Order tracking and status information are unclear.
- Users are forced to create an account before they can browse.

5.2 PROPOSED SYSTEM

The Cake Ordering System aims to provide a centralized cake ordering experience by dividing the customer journey into clear and easily understandable stages. It offers instant access to search and occasion categories, clear bakery and cake details, a dedicated customisation screen, easy cart management, a step-based checkout, and live order tracking with delivery partner contact options.

- Simple and consistent navigation through a four-tab bottom bar.
- Prominent search and occasion shortcuts (Birthday, Wedding, Anniversary, Cupcakes) on the Home screen.
- Guest access so users can start ordering without signing up.

- A customisation screen with weight, flavour, eggless toggle, message on cake, and delivery date and time.
- A sticky “Add to Cart” bar showing the running total.
- A four-step checkout indicator (Cart, Address, Payment, Confirm).
- Order status timeline and delivery partner details in one place.
- Reorder and rating options after delivery.

5.3 PROPOSED SYSTEM – DESIGN CHARACTERISTICS

Area	Design Approach
Branding	Cake-themed logo mark, chocolate brown header with curved edge, rose-pink and golden accents.
Navigation	Bottom navigation: Home, Orders, Cart, Profile; breadcrumb on inner screens.
Discovery	Search bar, circular occasion shortcuts, featured bakery cards.
Cake Selection	Menu list with images, price, category tabs, and weight options.
Customisation	Weight and flavour chips, eggless toggle, message on cake, delivery date and time slot.
Checkout	Step indicator, delivery address form, payment method options, order summary.
Tracking	Live map, delivery partner call/chat, status timeline, order details.
Feedback	Star rating, reorder, and back-to-home actions.
Consistency	Reusable components and common design tokens.

5.4 CAPABILITIES

- User registration and login with Google, Apple, and email options.
- Guest access (“Continue as guest”).
- Occasion-wise discovery (Birthday, Wedding, Anniversary, Cupcakes).
- Bakery menu browsing with category tabs.
- Cake customisation: weight, flavour, eggless option, message on cake.
- Delivery date and time slot selection.
- Cart management with price details.
- Address entry and saving.
- Payment selection through UPI, Credit/Debit Card, and Wallet.
- Order confirmation with estimated delivery time.
- Live order tracking with delivery partner call and chat.
- Order rating and quick reorder.

6. PROPOSED METHOD

6.1 USER RESEARCH

User research is the process of understanding user behaviour, needs, expectations, and problems before designing an application. It helps designers create solutions that are useful and user-friendly. For the Cake Ordering System, user research was conducted to understand how people order cakes online and what difficulties they face.

Research Methods

- User interviews
- Competitor analysis
- Online surveys
- Observation of existing applications

Research Findings

- Users prefer simple and fast navigation.
- Users want to find cakes quickly by occasion, flavour, and budget.
- Users want to choose weight, flavour, and eggless options and add a message without calling the bakery.
- Users expect secure and familiar payment methods such as UPI.
- Users want a clear delivery date and time slot, as cakes are time-sensitive.
- Users prefer real-time order tracking and the ability to contact the delivery partner.
- Users dislike being forced to sign up before browsing.

6.2 USER PERSONA

A user persona is a fictional representation of a target user created based on research data. It helps designers understand user goals, needs, and challenges.

Name: Divya Lakshmi
Age: 24 Years
Occupation: Working Professional

Goals

- Order a birthday or celebration cake quickly.
- Find nearby bakeries.
- Get the cake delivered at an exact time.
- Track delivery status.
- Reorder favourite cakes.

Needs

- Simple interface.
- Easy customisation.

- Fast checkout process.
- Multiple payment options.

Pain Points

- Complex application layouts.
- Customisation done through phone calls or notes.
- Uncertainty about delivery time.
- Mandatory registration before browsing.

6.3 WIREFRAMES

Wireframes are basic layouts that represent the structure and arrangement of elements in an application before creating the final design. Wireframing helps in planning screen layouts, navigation, and user interactions.

Wireframe Screens Created

- Splash Screen
- Login and Sign Up Screens
- Home Screen
- Cake Menu Screen
- Cake Customisation Screen
- Cart Screen
- Checkout Screen
- Order Confirmed Screen
- Track Order Screen
- Order Delivered Screen

Advantages

- Easy design modifications.
- Better planning of user interface.
- Identifies usability issues early.
- Improves communication between designers and developers.

6.4 DESIGN SYSTEM

A design system is a collection of reusable design elements that maintain consistency throughout the application. The design system includes:

Colour Palette

- Primary Colour – Chocolate Brown
- Accent Colour – Rose Pink and Golden Yellow
- Background Colour – Soft Cream / Off-White
- Text Colour – Dark Brown / Black

- Secondary Colour – Light Gray
- Success Colour – Green

Typography

- Headings and Buttons – Bold sans-serif
- Body Text and Labels – Clean sans-serif, Regular and Medium

UI Components

- Pill buttons and login / sign up tab switch
- Underlined input fields with show-password icon
- Search Bar
- Occasion category circles and Bakery Cards
- Cake menu rows with price and weight
- Weight and flavour selection chips
- Checkout step indicator
- Order status timeline and delivery partner card
- Bottom Navigation Bar

Benefits

- Maintains consistency.
- Saves design time.
- Improves user experience.
- Provides reusable components.

6.5 HIGH-FIDELITY UI DESIGN

High-fidelity UI design represents the final visual appearance of the application with complete colours, images, typography, icons, and interactive elements. The high-fidelity screens were designed using Figma by applying modern UI principles.

Design Principles Followed

- Simplicity
- Consistency
- Accessibility
- Visual hierarchy
- Responsive design

6.6 PROTOTYPE

A prototype is an interactive model of the application that demonstrates how users navigate between different screens. The prototype was created using Figma by connecting all designed screens and adding interactions, as shown in Figure 9.12.

Prototype Features

- Screen navigation
- Button interactions
- Order flow demonstration
- User journey simulation

Advantages

- Helps evaluate user experience.
- Identifies design improvements.
- Provides realistic application preview.
- Supports developer understanding.

7. ALGORITHM

7.1 USER LOGIN AND REGISTRATION

- User opens the app and the Splash screen is shown.
- User lands on the Login screen.
- User enters email/username and password, or selects Google, Apple, or email sign-in.
- System checks whether the required fields are completed.
- If credentials are valid, the user is taken to the Home screen.
- If the user is new, the Sign Up tab opens registration (first name, last name, email, phone, new password, confirm password).
- Registration data is validated, including password match, before account creation.
- Alternatively, the user selects “Continue as guest” and goes directly to the Home screen.

7.2 CAKE DISCOVERY AND SEARCH

- User opens the Home screen.
- User searches for a bakery or cake, or taps an occasion category (Birthday, Wedding, Anniversary, Cupcakes).
- Matching bakeries or cakes are displayed.
- User selects a bakery from Featured Bakeries.
- The menu is displayed with category tabs.

7.3 CAKE CUSTOMISATION, CART AND CHECKOUT

- User selects a cake and opens the Customisation screen.
- User chooses weight, flavour, and eggless option, types a message for the cake, and picks the delivery date and time slot.
- The Add to Cart bar shows the running total and the user taps it.
- The Cart screen shows items, subtotal, delivery fee, and total.
- User removes items if required, or continues browsing.

- User taps Checkout and enters or confirms the delivery address (name, phone, full address).
- User saves the address and proceeds.

7.4 PAYMENT

- Display the order summary.
- Present available payment methods: UPI, Credit/Debit Card, and Wallet.
- User selects a method and taps “Proceed to payment”.
- After successful completion, show the order confirmation. The user may also cancel the checkout.

7.5 ORDER TRACKING

- After confirmation, show the estimated delivery time and what happens next.
- User taps “Track Order”.
- The live map shows the route, delivery partner, and arrival time.
- The timeline updates: Order Confirmed, Baking, Out for Delivery, Delivered.
- User can call or chat with the delivery partner.

7.6 DELIVERY COMPLETION AND REORDER

- When delivered, the Order Delivered screen is displayed.
- User reviews the order summary and rates the experience.
- User can tap Reorder to repeat the order or return to the Home screen.

7.7 GENERAL DESIGN ALGORITHM

Requirement → Research → Problem Definition → Ideation → Information Architecture → Wireframe → Design System → High-Fidelity UI → Prototype → Testing → Feedback → Refinement → Final Handoff

8. DESIGN IMPLEMENTATION

8.1 SPLASH SCREEN

The Splash Screen introduces the brand with the application logo and tagline on a deep chocolate-brown background.

8.2 LOGIN PAGE

The Login Page allows users to access the application using email or username and password. It contains a login / sign up tab switch, a show-password icon, a Forgot Password link, Google, Apple, and email sign-in options, and a “Continue as guest” button.

8.3 SIGN UP PAGE

The Sign Up Page collects first name, last name, email, phone number, new password, and confirm password, with show-password icons and a prominent Sign Up button.

8.4 HOME PAGE

The Home Page greets the user with "What cake today?", a search bar for bakeries or cakes, circular occasion shortcuts, and Featured Bakeries cards showing delivery time and distance. The bottom navigation bar gives access to Home, Orders, Cart, and Profile.

8.5 CAKE MENU PAGE

The Cake Menu Page shows a hero image, bakery name, rating, and delivery time, followed by category tabs. Each cake row has an image, name, starting price, and weight options. A sticky "Add to Cart" bar displays the total.

8.6 CAKE CUSTOMISATION PAGE

The Customisation Page lets the user choose weight and flavour using chips, switch on an eggless option, type a message to be written on the cake, and select the delivery date and time slot.

8.7 CART PAGE

The Cart Page lists selected items with a remove option and a Price Details panel (subtotal, delivery fee, total), with Checkout and Continue Browsing actions.

8.8 CHECKOUT PAGE

The Checkout Page uses a four-step indicator (Cart, Address, Payment, Confirm). It contains delivery address fields with Save Address, payment method options (UPI, Credit/Debit Card, Wallet), an order summary, and Proceed to Payment and Cancel actions.

8.9 ORDER CONFIRMED PAGE

This page shows a green tick, a thank-you message, the estimated delivery time, order details, a "What's next?" note, and Track Order and Back to Home buttons.

8.10 TRACK ORDER PAGE

The Track Order Page provides a Live badge, a route map with arrival time, a delivery partner card with call and chat buttons, a four-stage order status timeline, and an order details panel.

8.11 ORDER DELIVERED PAGE

This page confirms delivery with a success graphic, shows the delivery partner and order summary, asks "How was your experience?" with a star rating, and offers Reorder and Back to Home actions.

9. SAMPLE OUTPUT

The following sample outputs are taken from the Cake Ordering System UI/UX project and demonstrate the final high-fidelity interface screens developed during the internship.

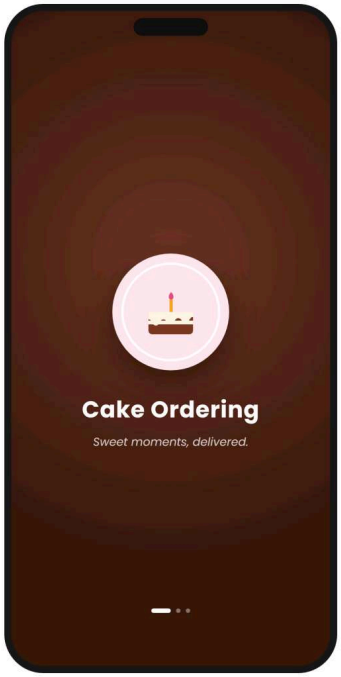

Figure 9.1 – Splash Screen

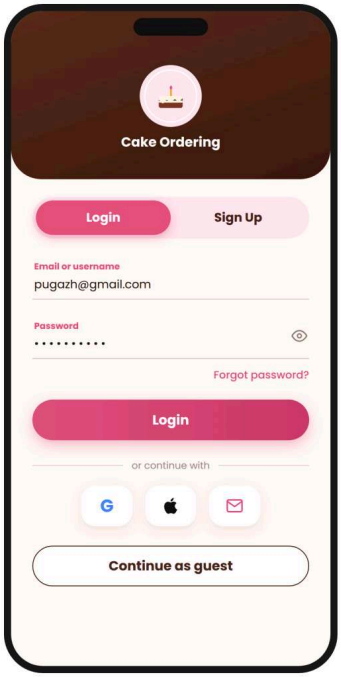

Figure 9.2 – Login Page

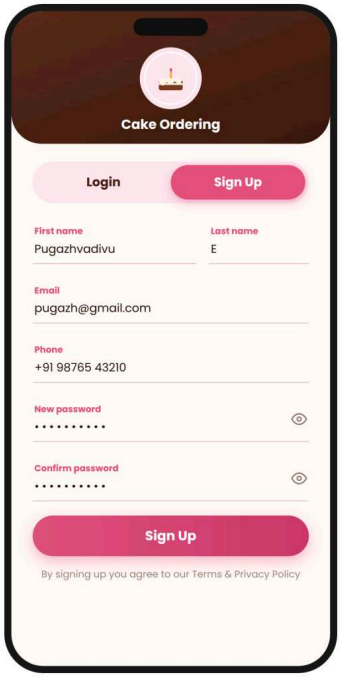

Figure 9.3 – Sign Up Page

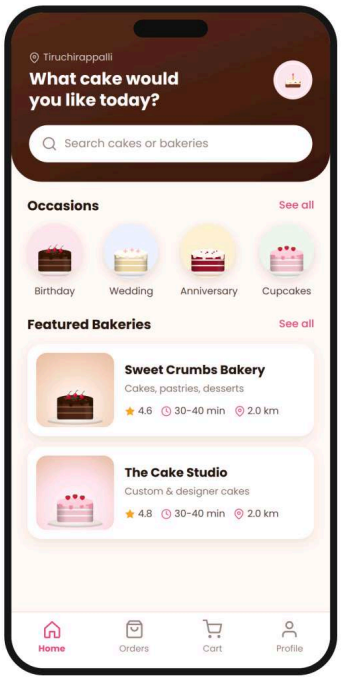

Figure 9.4 – Home Page

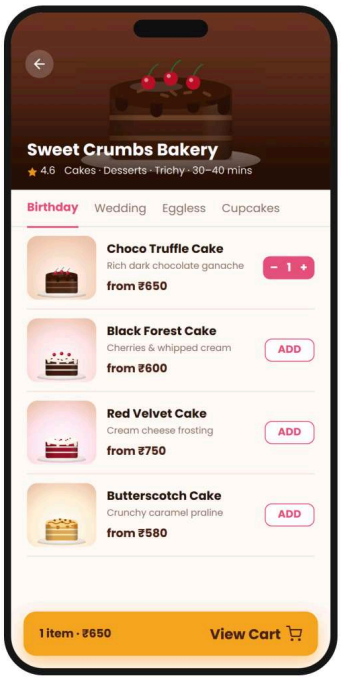

Figure 9.5 – Cake Menu Page

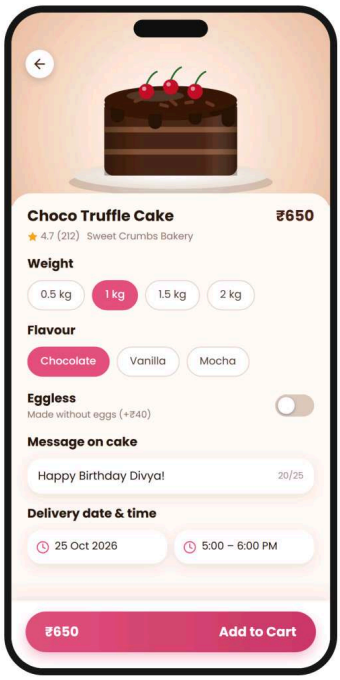

Figure 9.6 – Cake Customisation Page

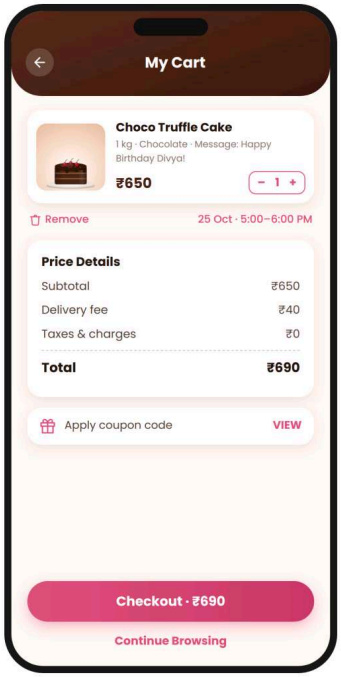

Figure 9.7 – Cart Page

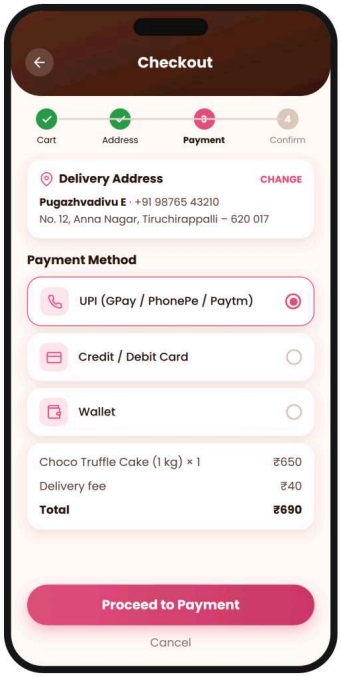

Figure 9.8 – Checkout Page

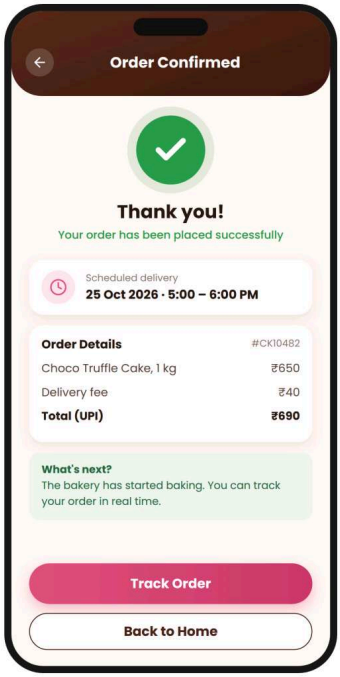

Figure 9.9 – Order Confirmed Page

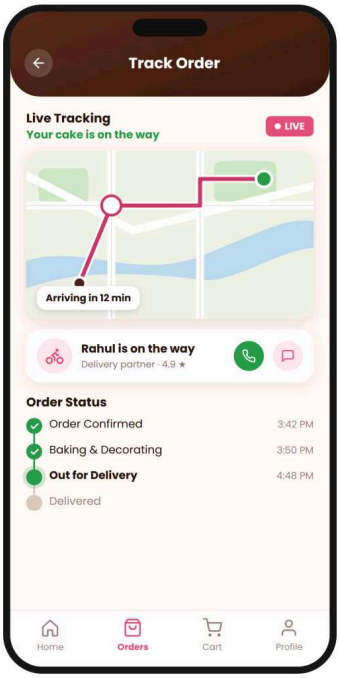

Figure 9.10 – Track Order Page

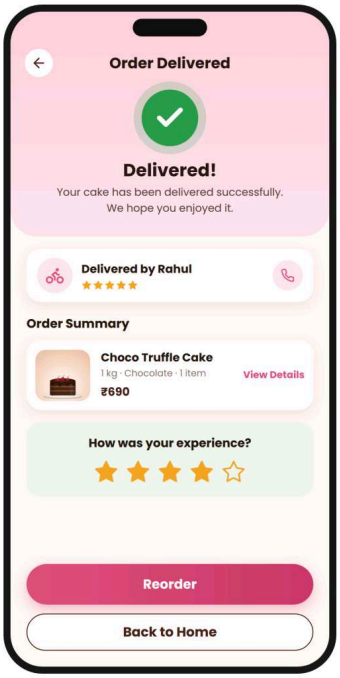

Figure 9.11 – Order Delivered Page

Complete prototype flow in Figma (screens connected in order):

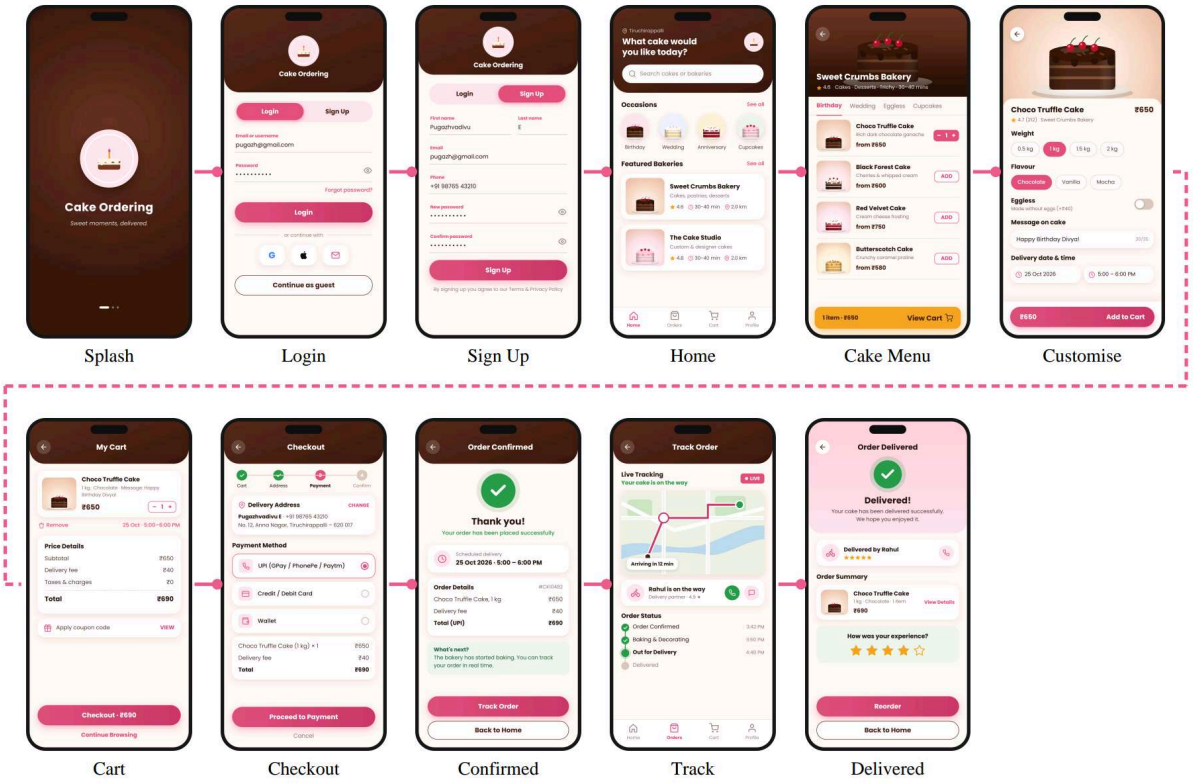

Figure 9.12 – Complete Prototype Flow in Figma

10. ANALYSIS

10.1 TESTING OVERVIEW

Testing is an important phase in the software development process used to verify the quality, usability, and performance of the application. The interface was tested to ensure smooth navigation, consistency, and user-friendly interaction.

10.2 FUNCTIONAL TESTING

Functional testing was performed to verify whether all prototype features work according to the requirements.

Tested Features

- Login, sign up, and guest access flow
- Navigation between pages and bottom navigation
- Search and occasion category selection
- Bakery menu browsing
- Cake customisation (weight, flavour, message, delivery slot) and add to cart
- Checkout and address entry

- Payment method selection
- Order tracking and delivery completion flow

10.3 UI TESTING

UI testing was conducted to check the visual appearance and consistency of the application.

UI Testing Includes

- Colour consistency
- Font readability
- Button alignment and tap-target size
- Image placement
- Layout structure
- Responsive design on different mobile screen sizes

10.4 USABILITY TESTING

Usability testing was performed to evaluate the ease of use of the application.

Testing Objectives

- Check user navigation flow.
- Identify design issues.
- Improve user interaction.
- Ensure simple and effective interface design.

10.5 TEST RESULTS

Test Area	Result
Splash, Login and Sign Up	Passed
Home Page Navigation	Passed
Category and Search	Passed
Bakery and Cake Browsing	Passed
Cake Customisation	Passed
Cart and Checkout	Passed
Payment Interface	Passed
Order Tracking	Passed
Delivery and Reorder	Passed
Responsive Design	Passed

11. CONCLUSION

11.1 LEARNING OUTCOMES

The internship at Media Wave Technologies, Tiruchirappalli provided practical experience in UI/UX design and real-time project development.

Skills Gained

- UI/UX Design principles
- User research
- Wireframing
- Prototyping
- Design system creation
- Figma tool usage
- Usability testing
- Professional communication
- Team collaboration

11.2 CONCLUSION

The internship provided valuable industrial exposure and helped me understand the complete UI/UX design process. The Cake Ordering System was successfully designed by applying user-centered design principles.

Through this internship, I gained practical knowledge in creating modern, responsive, and user-friendly mobile interfaces. The experience improved my technical skills, creativity, and confidence in handling real-world software projects.

12. FUTURE WORK

The future enhancements of the application include:

- AI-based cake recommendations.
- Voice-based cake search.
- Offers, coupons, and personalized deals.
- Order history, favourites, and wishlist screens.
- Saved multiple addresses.
- Photo upload for custom or photo cakes.
- Help and support section with live chat.
- Dark mode and accessibility improvements.
- Frontend development and backend integration of the design.

Media Wave
TECHNOLOGIES

INTERNSHIP OFFER LETTER

03rd Jun 2026

Dear **Ms. PUGAZHVADIVU E**

We are pleased to offer you an internship with **MEDIA WAVE TECHNOLOGIES.** This is an internship. Our goal is for you to learn more about **UI/UX DESIGN.**

As we discussed, your internship is expected to last Commence from **June 15, 2026, to July 15, 2026**. However, at the sole discretion of the Company, the duration of the internship may be extended or shortened with or without advance notice.

As an intern, you will not be a Company Employee. Therefore, you will not receive a salary, wages, or other compensation. In addition, you will not be eligible for any benefits that the Company offers its employees.

During your internship, you may have access to confidential, proprietary, and/or trade secret information belonging to the Company. You agree that you will keep all of this information strictly confidential and refrain from using it for your own purposes or from disclosing it to anyone outside the Company. In addition, you agree that, upon conclusion of the internship, you will immediately return to the Company all of its property, equipment, and documents.

Your responsibilities may include assisting in UI/UX design, wireframing, prototyping, user research, interface design, usability testing, and related creative activities.

Sincerely,

Chandru S
(HR Department)

Media Wave
TECHNOLOGIES

Internship Completion Letter

July 15, 2026,

Strictly Confidential

To Whom It May Concern

This letter certifies that **Ms. PUGAZHVADIVU E** has interned in the role of **UI/UX Design** with **Media Wave Technologies** during the period **15 June-2026 to 15 July-2026.**

While with Media Wave Technologies, she has remained dedicated and loyal to her work and responsibilities with our company. She has done an exemplary job while in this **UI/UX Design role**. She has always maintained a professional and courteous attitude and appearance while with our company.

Her decision to end her internship with our company is solely her own decision, and we wish her all the best in her future career opportunities.

If you have any questions, please clarify from the undersigned.

Sincerely,

Chandru S
(HR Department)

WD-54, Anandha bhavan complex,
